## Ifttt alexa skill

1 Install IFTTT on your phone. Install the IFTTT app on your Apple or Android phone. On Android: Open the Google Play Store, tap the search bar and type ifttt. Tap the IFTTT app icon and then tap INSTALL. Tap OPEN to launch the app once it's installed. On iPhone: Open the App Store and tap the Search tab. Tap the search bar and type ifttt and press the Search button. Then tap GET next to the IFTTT app icon. Tap OPEN to launch the app once it's installed. 2 Open IFTTTT. It's an app with icons that resemble a blue square with red and black at the bottom. You can tap the app icon on the home screen or in the app drawer to launch the app. If you previously installed the app in the store, you can tap OPEN to launch the app once it's installed. 3 Log in or create an IFTTT account. Swipe right multiple times and tap sign in with an existing IFTTT account, or you can sign up using your Google or Facebook account by tapping the respective options. To create a new IFTTT account without using your Google or Facebook account: Tap the list. Enter a valid email address. Please enter a valid password. Tap the list. 1 Tap Search. This is the magnifying glass icon at the bottom of the screen. 2 Tap the search bar and type alexa. Tap the search bar at the top of the screen and type alexa to search. 3 Scroll through pre-made Alexa recipes. Tap a recipe to learn a little more about what it does. 4 Tap the recipe and tap the Turn On button to the 'NYAK' position. When the recipe is activated, the switch knob will turn green and move to the right. IFTTT will now walk you through step by step to enable the necessary services if you haven't enabled them with previous IFTTT. Follow the on-screen instructions. 5 Tap OK to turn on any permissions. Depending on each recipe, you may be asked to grant IFTTT permission to use certain functions on your phone. For the recipe to work, you'll need to tap OK for the necessary permissions. 6 Connect your Amazon account. For recipes that work with the Alexa service, you will typically be asked to log in to your Amazon account with your Amazon account email address and password. Sign in and tap I agree to connect your account. Make sure the same Amazon account you use to set up your Alexa device. 7 Provide additional information or permission. For example, a recipe involving your phone call might require your phone number for the recipe to work. After you provide your phone number, you may be asked to verify your PIN number with an SMS text message before continuing. Provide any additional information and verification. Once you've finished it all, your IFTTT recipe will now be up and running. If you don't return to the IFTTT app when you're done, you can tap the app on the home screen to return application. 8 Tap the My Applet tab. This is an icon that resembles a page by writing in the lower right corner of the application. This will list your current connected recipes. You can scroll through your current recipe (also called an applet) and tap one to select it. 9 Disable or enable recipes. You can manage any recipe, or applet by tapping it. To turn it off, tap the Live button to turn off the applet. The switch knob will move left and turn gray. All you have to do is switch this button again to activate it. 1 Open IFTTTT. It's an app with icons that resemble a blue square with red and black at the bottom. You can tap the app icon on the home screen or in the app drawer to launch the app. This is an icon that resembles a page by writing in the lower right corner of the application. This will list your current connected recipes. 3 Tap +. This is the plus sign button in the upper right corner of the screen. 4 Tap + this. This is the blue plus sign next to this word in the middle of the page. This will allow you to choose which service you will use to trigger your recipe. 5 Type alexa in the search bar and tap Amazon Alexa. As you type in the search bar, matching search results are filtered below. Tap the Amazon Alexa app icon when it appears below. 6 Select a trigger from the list by tapping it. For example, you can select a trigger to be the specific phrase you say to Alexa by selecting Speak a specific phrase. If you want a trigger when the Alexa alarm goes off, you'll choose your Alarm to sound. Select the type of trigger you want to create. At this point, if you haven't already, IFTTT will guide you through enabling Alexa with IFTTT. Tap the Connect big button and sign in to your Amazon account. 7 Enter trigger details. For example, if you select Speak specific phrases you'll need to type the phrase you want and tap the check mark icon or Done in the upper-right corner. 8 Tap + it. This is the blue plus sign next to the word near the bottom of the page. 9 Select the service you want to use for the action. As you type in the search bar, matching search results are filtered below. Tap the service app you want to select when it appears below. For example, you'll need to select Twitter as an action service. 10 Select the action you want the service to perform. Once you've selected a service, you'll have a list of actions the service can take. Tap one to select it. At this point, if you haven't already, IFTTT will walk you through enabling the service. Usually this only involves entering your account information or activating permissions on your phone. 11 Grant additional permission and information. Read the instructions and enter more information that action is required and then tap the check mark icon or Done in the upper-right corner. This usually involves logging into your account for the service you choose, but not all actions require Additional. 12 Tap Done. It's at the bottom of the page. Preview the applets for your recipes and and Finish button is big blue when you are satisfied. You'll see the switch turn green and say Live—your recipe is now finished and activated. You can also edit the applet title by tapping edit title or switch Receive notifications when this applet is running that can be useful if you want to know each time your applet performs an action. Ask a Thank You Question! Thank! Every day on wikiHow, we work hard to give you access to instructions and information that will help you live a better life, whether it is making you safer, healthier, or improving your well-being. In the midst of today's public health and economic crisis, when the world is shifting dramatically and we are all learning and adapting to changes in everyday life, people need wikiHow more than ever. Your support helps wikiHow to create more in-depth illustrated articles and videos and to share our brand of trusted instructional content with millions of people around the world. Please consider contributing to wikiHow it is today. This article was co-authored by our team of trained editors and researchers who validated it for accuracy and comprehensiveness. Co-authoring: 4 Updated: October 13, 2018 Views: 8,846 Categories: Amazon Alexa | IFTTT Print Send a fan email to authors Thank you to all authors for creating a page that has been read 8,846 times. Amazon's Alexa voice assistant works very well on its own, but you can greatly expand the assistant's capabilities by connecting it with the If This Then That (IFTTT) protocol. You can tell Alexa to do a variety of tasks, from silly to very useful, including everything from getting notified when an astronaut reaches space to finding your lost phone. To get started, all you need is a smartphone, an IFTTT app, and an Alexa device. Read on for our Top Alexa/IFTTT recipe. Page Prev 1 of 18 Pages Prev Next 1 of 18 IFTTT Advanced with Alexa is not difficult, but it takes some patience. First, you may need to download the app and create an account for Alexa, IFTTT, and any products or services you'll control, such as Philips Hue lights. Then, go to the services page in IFTTT and click Alexa. After doing so, you'll see a ton of Alexa-specific applets. For them to work, you'll need to link to your account info on the service. For example, there are many applets that require a Google account, such as Calendar and Google Drive. Simply create a quick pass through the All Services page at and activate the one you think you're interested in. You'll need to trigger multiple Alexa applets by giving custom commands to your device. It is spelled quite clearly in IFTTT or through the application. Page Prev 2 of 18 Pages Prev Next 2 of the Next 18 This is one the simplest applet, but very helpful and by far the most popular of all combos IFTTT / Alexa. All you need to do is give ifttt permission, and then activate the applet with Alexa by saying, Alexa, trigger Find My Phone. That's it. When you lose your phone, just tell Alexa to find the device, and Alexa will call your phone. Just follow the ring. Prev Page 3 of the Next 18 Prev Pages 3 of the next 18 Alexa shopping list functions are useful: no pen, no paper and no forget eggs. Now, thanks to IFTTT, you can get your shopping list emailed to you as you drive to the grocery store. To enable applets in the IFTTT app, just ask Alexa, What's on my shopping list? and you'll get a handy list sent directly to your Gmail account in seconds. Prev Page 4 of 18 Next Prev Page 4 of 18 Next When Harmony introduces smart TV remotes, millions of people who watch sports, play PlayStation, and a buildup of celebrated audio components. I was one of them, because this remote allowed me to bundle different activities, such as turning on the TV, receiver and PS4, into a single button command. Harmony and Alexa have combined to bypass buttons and activate activity with your voice. For example, say, Alexa, trigger Watch TV, and your TV, receiver, and cable box will turn on. Just give me the necessary permissions in the IFTTT app, and you don't have to put that big burrito to watch the game anymore. The mind is blown away. Prev Page 5 of 18 Next Prev Page 5 of 18 Next Nest brings the world of thermostats to study, trying to help families save money, save planetary energy and provide remote control gadgets. Now, with Alexa you can use your voice to heat up your home as you drive back to your igloo after flying home from the Caribbean. You can set this feature in less time than the plane needs for a taxi to the gate: turn on the applet in IFTTT, give nest the appropriate permissions and tell Alexa to trigger it. The default command is, Alexa, trigger nest to 72 (degrees Fahrenheit), but you can set the thermostat to the right temperature by creating your own phrase. Prev Page 6 of 18 Next Prev Page 6 of 18 Next Applet is still a bit raw, but if your head is too full of things to remember, then give the Google calendar applet a shot. Follow me here: Enable applets in the IFTTT app on your smartphone, give Gmail the necessary permissions, then create a to-do list on Alexa. Each time you add something to the list, Alexa will send a Quick Add Event to your Google Calendar. The key here is Quick Add, which means the applet won't set the date or time to perform; it will even event now, and you'll then have to log in and edit the specifics later. It's not perfect, but at least you get some sort of event on your calendar before you forget. Prev Page 7 of the Next 18 Prev Pages 7 of the Next 18 It may not cure diseases or make you more efficient in your work, but this clever little applet is fun. If If If The book club you're interspersing spontaneously turns into a fiesta, turn on this applet and say, Alexa, trigger the party time. Your Philips Hue colored lights will automatically enter the color circle. What happens after the party lights go on is up to you. Prev Page 8 of 18 Next Prev Page 8 of 18 Next Applet is certainly a preview of the many multilayer recipes on the horizon. Let's just say, Alexa, trigger the lockdown, and he'll bring your house safe and secure for the night. This command simultaneously mutes your android phone, turns off all your Hue lights and ensures Garageio closes your garage door, making it a three-in-one applet for the home. Garageio, incidentally, is not a garage door company; this is a smart home system that you can install to control your existing doors remotely. Prev Page 9 of 18 Next Prev Page 9 of 18 Next Domino's, the pizza delivery giant, has made an applet that lets you order fresh pies. First, you need a Twitter and Domino account. Go to your Domino's pizza profile page, check the box that says, Sign up to order a Tweet and link to your Twitter account. You then need to create a pizza order and click Save as easy order. Now find the IFTTT Alexa trigger order pizza applet and turn it on. Once you've given that command, Alexa will send #easyorder to Domino's for you, and in short order, you'll have a DM from the pizza chain to confirm your order. Page Prev 10 of the Next 18 Pages Prev Next 10 of the Next 18 That happens to everyone: You set a timer for the oven while sounding the song, only to burn the meat buns because the sound of your home stereo has drowned out the soft bells warning alexa timers. This applet solves the problem by telling your Hue lights to blink and turn off when the Alexa timer reaches zero. Turn on the applet in the IFTTT app, and whenever you tell your Alexa to start the timer, this flashing light function is engraved into the command. Prev Page 11 of 18 Next Prev Page 11 of 18 Next Ever let Prime Music play the playlist recommended for you? Never drive and hear some songs on the playlist that you like, and then poof... Are they gone? No need to take your eyes off the road with this applet that creates a Google Docs spreadsheet of every new song Alexa plays. He will document every song, band, and album, the perfect length to tweet your new favorite song to all your adoring followers and to send a complete playlist to your allies on Facebook. Page Prev 12 of 18 Pages Prev Next 12 of the Next 18 Tired with your disco-heavy music library? This applet sends new alexa-playing songs to your preferred Spotify playlist. Just follow the instructions to connect Spotify and Alexa to IFTTT, then configure the appropriate permissions both, including selecting (or creating) playlists on Spotify where Alexa will send new songs. Prev Page 13 of the Next 18 Prev Pages 13 of the Next 18 Can't remember the junk day? Let Alexa know that the schedule is automatically emailed to you with this You must set up a ToDoist account, enable the service in IFTTT and enter some basic info about your list items. Once you've done that, you can say, Alexa, add it to my to-do list. You'll get an email reminding you to go for a walk with the dog, take out the trash - or whatever else. Plus, the item will be added to your ToDoist application list. Prev Page 14 of the Next 18 Prev Pages 14 of the Next 18 Sports fans want to know when their team plays next. Alexa already does this for you, but with this applet, the assistant will also send information to your Google Calendar, so you know when to plant your back on the couch. Just ask Alexa, and not only will the assistant say the answer, but you'll also get an entry in your Google Calendar. Second, open the ESPN applet and select your team (you can set up as many teams as you like) and turn it on. When the match is over, you will get the final score via push notifications. Pretty handy. Prev Page 15 of the Next 18 Prev Pages 15 of the Next 18 Here's a great applet that instantly makes the smart home concept accessible to anyone: For about \$25, you can pick up a WeMo smart switch, which allows you to control certain electrical appliances remotely. Well, how about turning those lights on or off or the fan with a voice asking for Alexa? Now, you have remote-controlled home automation for a little money. Just select a phrase to trigger your exposure, in an Alexa pattern, trigger + your phrase, and your smart plug will turn the device on or off. Prev Page 16 of the Next 18 Prev Pages 16 of the Next 18 Does one part of your page constantly need more watering than any other area? Just activate it with this great applet. The catch? You need to have a Skydrop smart sprinkler system. You should designate specific zones for watering in your Skydrop system, including zones where your neighbors shop for flowers. Once you've done that, follow the instructions to create a trigger phrase with Alexa, and you'll be able to quickly protect your gift roses with a refreshing cold shower. Prev Page 17 of the Next 18 Prev Pages 17 of the Next 18 Creation Applets is not rocket science, but you have to find a service that can work with Alexa capabilities. From the IFTTT site or app, press the button for the New Applet. Next, select + IF and then the Amazon Alexa button. After that, create the trigger, which will start the applet. Finally, choose what will happen when you activate that trigger, from the list of available services. There are hundreds to choose from, so enjoy experimenting!
